

Auriga—Enterprise Applications — Overview

AURIGA HAS ALMOST 20 YEARS OF SUCCESSFUL EXPERIENCE of enterprise applications development, maintenance and support. Auriga has gained an exceptional level of expertise in e-Commerce, sales-support, and CRM systems, as well as for document, content, and knowledge management applications. Auriga's engineers have extensive experience developing all levels of n-tier distributed software (back-end, middleware, front-end) and projects for large multinationals, such as Toshiba.

Auriga has a proven track record of developing open, scalable, and integrated document & knowledge management solutions which allow users to locate, control, review, revise and distribute up-to-date information, critical to the success of mid-size and large enterprises. The Auriga team has successfully accomplished a variety of projects in the development and implementation of document management systems for enterprise networking usage, covering the creation, storage, retrieval and re-use of documents.

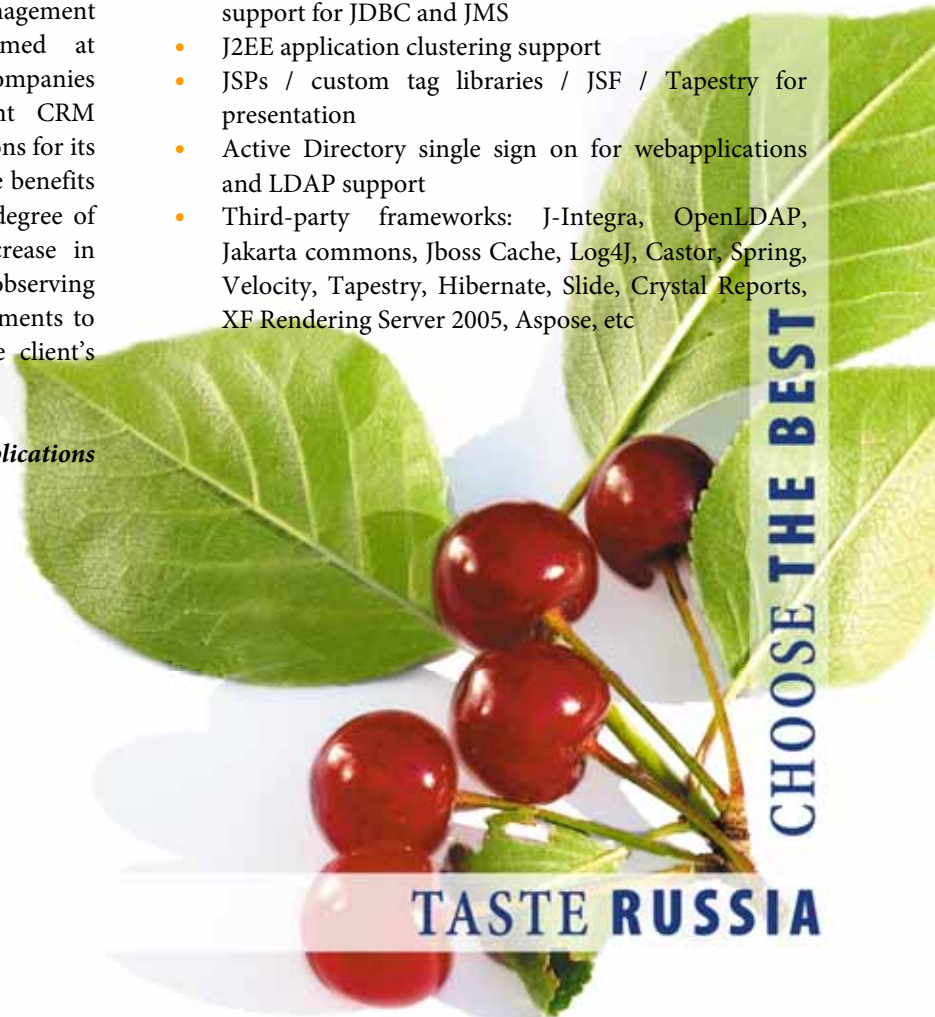

Auriga provides custom Client Relationship Management (CRM) software development services aimed at supporting all the CRM activities its client companies have. Auriga strongly believes that efficient CRM software solutions are important business solutions for its clients' customers, employees, and partners. The benefits of CRM use include cost reduction, a higher degree of customer satisfaction and often a direct increase in revenues. Auriga offers custom CRM solutions, observing close attention to its client's needs and requirements to ensure complete software integration into the client's existing business processes.

Auriga provides the following enterprise applications development services:

- Architecture design
- Custom software development
