# Public Access Property Viewing Application Development and Re-engineering

---

## Client

MA Department of Revenue

## Solution

Public Access Property Viewing Application is an Internet/Intranet browser based application presenting graphical and text format information about different kinds of properties, property value comparisons, and custom reports based upon user defined criteria

### Key Features

- Easy and straightforward application with flexible menu
- Supporting single (intranet) and multiple community (internet/hosting) approaches
- Footprint and detailed floorplan sketch presentation from custom sketch-vector
- Parameter file, containing several custom settings for application, allows changes on the “fly”
- Data and layout separation (XML/XSL). XML data preparation by using SQL-92 standard
- Support Linux and Windows NT/2000 web server platforms and Microsoft Internet Explorer 5.0+ and Netscape Navigator 4+ browsers for client sites.

## Auriga's Contribution

Design, development, and implementation from scratch.

## Implementation

Windows 2000 / Linux 7.1, ORACLE 7.3.2, Tomcat 4.0.1, jdk1.3.1, jdbc connection, JSP/Servlet, XML/XSL, javascript.
